## Callback:

→ Function passed into another function that can be used later sometime in our code

→ Perform async operations
higher order
function $a(b)$ → callback.

## Problems with Callbacks

1) Call back Hell

2) Inversion of Control

## Promises

The **Promise** object represents the eventual completion (or failure) of an asynchronous operation ➡

Son got 90%.

3 states
1) pending

2) fulfilled
